

ABSTRACT OF THE DISCLOSURE

5 A power generator includes a base assembly that has a lower
portion and an upper portion. The lower portion is for supporting
the upper portion of the base assembly. A solar assembly is
coupled to the upper portion of the base assembly. A power storage
assembly is operationally coupled to the solar assembly. The power
10 storage assembly is for storing electricity from the solar assembly.
The power storage assembly is positioned within the lower portion
of the base assembly such that the lower portion of the base
assembly is for protecting the power storage assembly from adverse
weather. A turbine assembly is coupled to the upper portion of the
15 base assembly. The turbine assembly is for producing electricity
from wind. The turbine assembly is operationally coupled to the
power storage assembly such that the power storage assembly is for
storing electricity produced from the turbine assembly.
